## THE SMART WAY TO BUY REPLACEMENT TIRES FOR YOUR MOTORHOME

**Here's Tire Insider info that can save you \$1,000 AND MORE!**

Most tire dealers take the easy way out. They don't give you a choice. They simply sell you the exact same tires that you already have on your motorhome, whether that makes economic sense for you or not.

**That's not what we do at [MotorHomeTires.com](http://MotorHomeTires.com)**

Because we at [MotorHomeTires.com](http://MotorHomeTires.com) understand the entire world of motorhome tires, we can give you options that provide you with a great set of tires, at truly spectacular savings! Here's how we do it...

Let's say that you need a new set of tires for your motorhome. You take a look at the old tires to check the size, which happens to be 255/80R22.5.

**What do those size numbers on the sidewall really mean?**

- 255** – Width of the tire's sidewall in mm
- 80** – Ratio of tire's section height to width
- R** – Radial tire
- 22.5** – The diameter of the wheel, in inches

What those numbers tell you is that this specific motorhome tire is the correct width and height to fit your motorhome. It has the correct circumference to fit within your wheel wells without rubbing, and to produce accurate readings from your speedometer.

## WE HAVE A BETTER WAY...

But what if there was a better solution, using a tire that meets all these requirements, yet costs you much less? There is!

By substituting our 265/75R22.5 motorhome tires for your 255/80R22.5's, you get a nearly identical-sized tire that still fits your wheels and your motorhome, maintains your speedometer's accuracy – and saves you a bundle of money as an extra bonus!

This same money-saving process can also be used to replace your 235/80R22.5 motorhome tires with our 245/75R22.5 size. That's why MotorHomeTires.com is the better way to buy your next set of motorhome tires!

**No installation hassles: we come directly to you!**

**[Watch Our Video](#)**

When you save on a set of motorhome tires from [MotorHomeTires.com](http://MotorHomeTires.com), you can also benefit from our \$99 mobile installation service, available nationwide from our network of 4,000 commercial installers. Our TIA Commercial Certified installers will come to your home, business, campground, RV storage facility, or anywhere else your motorhome happens to be. No more waiting in some tire showroom for hours! [MotorHomeTires.com](http://MotorHomeTires.com) also offers you a road hazard warranty for just \$399, to give you peace of mind when you are out there on your travels.

## WHEN SHOULD I REPLACE MY MOTORHOME TIRES?

**Every six years.** Consider this: from the moment that each of your motorhome tires is first pumped up with its full recommended air pressure of around 100 PSI, its internal steel belts and other components go to work, tirelessly containing this high pressure. After six years of doing this, along with accelerating, braking, and cornering your heavy motorhome during its travels, your tires have done their jobs with distinction. They have reached the limits of their designated lives, and it is time to replace them. At [MotorHomeTires.com](http://MotorHomeTires.com), our #1 priority is your safety on the road. Your tires are the single most important element contributing to your on-road safety.

## UNDERSTANDING DOT PRODUCTION DATES

Each of your motorhome's tires has a DOT code stamped into the sidewall. It identifies the plant where the tire was made, but the most important part of the code is the last four digits. This tells you the week and the year that the tire was manufactured. Why is this important? Because tires deteriorate as they age, even if they do not accumulate a lot of miles. Exposure to the UV rays and intense heat of the sun, as well as the ozone from smoggy air in many cities, can hasten this process. Eventually, the tire will become unsafe to drive on. Major tire manufacturers suggest that after five years, you should inspect your motorhome tires annually for signs of aging. After six years, your motorhome tires should be replaced, regardless of how good they look, or how low the number of miles on them.

### How Old Are My Tires?

Here's what the DOT code on each of your tires looks like.

"39" represents the 39th week of the year (week of Sept 21) "09" represents 2009. A DOT date of "3909" means the tire was produced the week of September 21, 2009.

## SIDEWALL MICRO-CRACKING: SHOULD I BE CONCERNED?

According to Goodyear, "Weather cracking is a naturally occurring condition that results from exposure to heat and sunlight." Other causes of micro-cracking include letting your motorhome sit undriven for long periods, living in a smoggy area, or too much tire washing and/or tire dressing usage. Most manufacturers suggests replacing a motorhome tire if the cracks are more than 1/16" deep, or if you can see the internal parts of the tire through the cracks. If you think you have a micro-cracking issue, please give [MotorHomeTires.com](http://MotorHomeTires.com) a call at 866-501-1998 for a personalized solution to your problem.

## BUY A SPARE... AND BE PREPARED

Your motorhome needs a spare tire. Why? Because if you get a flat or other tire damage out on the road, it could take days to get a replacement tire – days during which you won't be able to go anywhere! If you purchase an extra new tire to use as a spare, along with your new set from [MotorHomeTires.com](http://MotorHomeTires.com), you can store it away in your vehicle, for that day which is surely coming! You don't need to mount it on an extra wheel – the tire service person can handle that. It's cheap trip insurance and peace of mind.

## NEVER USE AN OLD TIRE AS A SPARE

Face it – you are replacing your motorhome's tires because they are no longer safe to drive on, right? Their time is up! So why would you want to put one back on your vehicle and continue driving on it? That's not a smart strategy! Those old tires should be scrapped and never driven on again – and let's not get into the questionable ethics of selling them to someone else...just don't!

## TIRE CARE TIPS: FOR MAXIMUM MOTORHOME TIRE LIFE

To be sure of getting the longest, safest lifespan for your motorhome tires, follow these best practices:

**Check your tire pressures before every trip, without fail:** It's just not worth the aggravation to start your trip with one or more poorly inflated tires! You could experience handling problems, poor fuel economy, or even a blowout. Why risk it?

**Never use tire dressing:** It makes your tires run hotter and shortens their life.

**Keep your tires out of the sun and covered when your motorhome is parked:** Use tire covers to slow the rate of micro-cracking from sun and smog exposure. A garage works just as well.

**Don't let your motorhome sit too long between drives:** Your tires can get "flat spots" after sitting in one place for awhile without being driven. This will produce an uncomfortable driving situation for the first few miles you drive it. In extreme circumstances, it could become permanent. To avoid this, take your motorhome for a short drive every month or so, to let the tires roll and return to their proper round shape.

**Use internal balancing beads, not external balancing weights:** Hammered-on external balancing weights are obsolete – they can scratch and damage your nice aluminum wheels, they can fall off, and they cannot adapt to the changing balance of your tires over time. Internal balancing beads, placed inside your tires, provide you with dynamic balancing that keeps your wheels looking great and your tires running true, throughout their lifespan.

## BEFORE YOU HEAD OUT, DO A "PRE-FLIGHT CHECK"

If you were a pilot, wouldn't you check your plane thoroughly before each takeoff? It's no different with your motorhome, if you truly want to be assured of a "smooth flight!" Clear your mind, then slowly walk around the motorhome and do a visual inspection. Check that everything looks right, all of its systems are in proper working order, the tires are inflated to spec, all the fluids are full, all of your supplies are aboard, and everything is secured in its correct place. Once you have done this, you can voyage with confidence, and have a great time!

## HAVE FUN AND STAY SAFE OUT THERE

If something doesn't look right, investigate and fix it right away. Don't ignore a problem or leave it to be dealt with during the trip. Remember that everything you have to fix out on the road is more expensive and takes more time than doing it at home. It can also ruin your trip.

**REMEMBER...**  
**A LITTLE PLANNING GOES A LONG WAY**  
**HIT THE ROAD AND HAVE SOME FUN !!!!**
